Empathy Map Canvas — PetPaws Application

The following empathy maps represent the key user personas for the PetPaws pet e-commerce platform. Each map captures what users Say, Think, Do, and Feel, along with their core Pains and Gains.

EMPATHY MAP — Persona 1: Ravi — First-Time Dog Owner

SAYS: "I just got a Labrador puppy and I have no idea what food brand is right for his age and size. I need everything — food, collar, leash, toys — in one place."

THINKS: "Which food is nutritionally complete for a 3-month-old puppy? Are these reviews from actual dog owners or random people? Is this store trustworthy?"

DOES: Searches multiple websites to compare pet products. Reads forums and YouTube videos. Asks friends with dogs for product recommendations. Places orders from different websites.

FEELS: Overwhelmed by the volume of choices. Anxious about his pet's health and safety. Excited about finding the right products. Frustrated by irrelevant search results on general platforms.

PAINS: No single dedicated pet platform. No pet-type filtering. No breed-specific recommendations. Risk of purchasing wrong products. High time cost of research.

GAINS: A one-stop pet store with puppy-specific category filters, verified purchase reviews from dog owners, clear stock availability, and a simple checkout process.

EMPATHY MAP — Persona 2: Priya — Experienced Cat Owner

SAYS: "I trust online reviews but I can never tell if the reviewer actually owns a cat. I've bought supplements that weren't suitable for cats because the reviews were generic."

THINKS: "Are these health supplements vet-approved? Has the reviewer actually used this on their cat? Can I track my order easily? Will the return process be hassle-free?"

DOES: Filters products by price and rating. Reads multiple reviews before purchasing. Maintains a wishlist of products to try. Reorders favourite brands monthly.

FEELS: Cautious and selective. Values quality over price. Feels let down by generic platforms that do not differentiate between pet types. Appreciates platforms that understand her needs.

PAINS: No verified pet purchase system. Mixed reviews from non-pet owners. Difficult to filter by pet type on general platforms. No wish list for recurring purchases.

GAINS: A Verified Purchase badge, cat-specific product filtering, wishlist with reorder capability, and transparent order tracking with real-time status updates.

EMPATHY MAP — Persona 3: Meena — Pet Store Admin Manager

SAYS: "Managing stock manually is a nightmare. I need to know which products are running low before customers place orders and get disappointed."

THINKS: "Is there a way to view all orders in one place? Can I update order status and add tracking numbers without needing a developer? Why is stock management so fragmented?"

DOES: Updates product listings manually via spreadsheets. Tracks orders through email notifications. Monitors stock counts individually. Responds to customer queries about order status.

FEELS: Stressed by the operational burden. Concerned about overselling out-of-stock items. Motivated to improve customer satisfaction. Frustrated by the lack of integrated admin tools.

PAINS: No real-time low-stock alerts. No centralized order management dashboard. Manual revenue tracking. No analytics for product performance.

GAINS: An admin dashboard with KPI cards, monthly revenue charts, low-stock alerts, product CRUD, order status management, and customer account controls — all in one place.
