Problem – Solution Fit — PetPaws

The Problem–Solution Fit canvas maps each identified customer pain point to the specific PetPaws feature that resolves it. This ensures every solution element is grounded in a validated user need rather than a technology-first assumption.

Pain Point	Customer Problem	Existing Behaviour	PetPaws Solution
P-1	No dedicated, pet-specific e-commerce store in India	Pet owners browse multiple generic platforms (Amazon, Flipkart) with no pet-focused UX	PetPaws provides 15 pet-specific product categories and 8 pet-type filters (Dog, Cat, Bird, Fish, Rabbit, Hamster, Reptile, All)
P-2	Cannot trust product reviews from non-pet-owners	Reads generic reviews on platforms where reviewers may not own the same type of pet	Verified Purchase badge is auto-applied when a user has a Delivered order for the reviewed product, ensuring authenticity
P-3	Complex multi-category checkout not optimised for pet products	Abandons cart due to lengthy, confusing checkout processes on generic platforms	3-step checkout wizard: Address → Payment (COD/Card/UPI) → Review & Confirm — with saved addresses for repeat purchases
P-4	No order tracking visibility after purchase	Relies on email notifications and manual follow-ups with sellers	Real-time order status timeline (Pending → Confirmed → Shipped → Delivered) with admin-assigned tracking numbers visible to users
P-5	Admin lacks integrated analytics and stock management	Uses spreadsheets for inventory tracking and order	Admin dashboard with KPI cards, monthly revenue bar chart, low-stock alerts (< 10 units), top-selling product

		management without any visual analytics	rankings, and full product CRUD
P-6	Difficulty saving and managing preferred pet products	Screenshots or bookmarks product pages and manually revisits them for purchase	Wishlist feature with persistent MongoDB storage; one-click move-to-cart from wishlist page
